Profile

I am a full-stack developer with 3+ years experience developing, testing, and maintaining enterprise software applications. I like contributing and create to open source projects.

Work experience

Software Developer

Apr 2019 - Present

Conexa / E-comerciar, Buenos Aires, Argentina

- I developed an application to purchase in restaurants from a mobile phone. I made the API in Laravel 5.6, the web app for admin and restaurant owners in Vue.js and mobile app in React Native. The order on the mobile app was updated in real-time using sockets and the user could see a display of Google map with nearby restaurants, they also could pay with VISA, MasterCard, and American Express.
- I developed an electronic cash register native Android app for Ingenico Axiom D7 device, it had the fiscal printer, bluetooth printer, card readers, cradle printer integrated and had multiples user roles into the app, auto initialization parameters, shopping cart, a payment processor with Tetra Side, Scanner EAN/QR and cards reader.
- I developed an application to join Mercado Libre and Glovo, the Mercado Libre sellers could view their orders and make deliveries with Glovo from the web app. I made this application using Laravel 5.7 for API and React.js for Web app. I used Here to maps and applied AI to order multiple delivery points as well as the best route for the Glover.
- I developed Glovo plugin for Tienda Nube in Symfony 4.0, the Tienda Nube merchants could send their orders with Glovo and see them in real-time tracking.

Mobile Developer

Apr 2020 - Jun 2020

Freelancer, United States

Developed a React Native application with Expo for a Train Company, the users could buy cards and tickets, they could also recharge, inactivate, and view their cards in the app, they had a module to select departure and arrival station to and to see the train schedule.

Mobile Developer

Dec 2019 - Apr 2020

Freelancer, United States

Developed a React Native application for a carrier company, the truck drivers received his tasks to pick up cars according to their location and cargo, they could scan the VIN car codes and the application filled the car information, they could see their route and car information. The app sent the driver location in the background to backend servers.

Software Developer

Jan 2018 - Apr 2019

Intelix Synergy, Venezuela

- I applied clean code practices and design patterns to develop a maintainable and scalable code for a Cash Register Application

- I create new code and improved existing code using SOLID design principles
- I developed a client search and register module
- I developed a module to match multiples kind of user identifications using regular expressions
- I developed a JavaFX desktop application to manage store setups of around 30 countries
- I developed a Personnel management system with Laravel 5.5
- Implemented Scrum
- Java 8, Java FX, Laravel, Git, SQL, DB2, MySQL, Eclipse, JPA.

Education and Qualifications

Electric Engineering

Dec 2013 - Jul 2018

Universidad de Carabobo, Venezuela

App development career with React Native

Platzi

Smart Checkout Certification

Sep 2019

Mercado Pago, Argentina, Buenos Aires

I am certified by Mercado Pago to integrate his Smart Checkout
